In 2017 Arizona’s community colleges embraced a Strategic Vision for 2030, which focuses college efforts around three major goals: expanding access to postsecondary credentials; increasing transfer and completion of associate degrees and certificates; and improving alignment between college programs and workforce needs.

The Strategic Vision for 2030 builds upon the colleges’ previous long-term plan, published in 2011, and outlines how Arizona’s ten community college districts will continue to improve student outcomes, as well as how the districts contribute to Arizona’s broader economic and educational goals. In particular, the Strategic Vision for 2030 creates a framework for reaching the Achieve60AZ goal that by 2030, 60% of the Arizona working-age population will hold a postsecondary credential.

A major function of the Strategic Vision for 2030 is the collection, analysis, and publication of data pertaining to 34 short-term, mid-range, long-term, and follow-up metrics. Although this report contains several metrics that are new in 2017, most have been in place for years, making it possible to evaluate trends in student progress and outcomes.

Statewide and district-level data will continue to be used to guide improvement efforts at community colleges across the state. Statewide data will also be shared with the Arizona Board of Regents, the Arizona Department of Education, and Arizona’s workforce development and business communities in order to assist in the improvement of educational and economic pathways.

The Strategic Vision for 2030, as well as a Technical Guide that provides detailed definitions of each metric, can be found online at: www.arizonacommunitycolleges.org.
METRICS

The 2017 Strategic Vision Outcomes Report presents data related to 34 short-term, mid-range, long-term, and follow-up metrics. These data identify areas of strength, as well as places where Arizona’s community colleges will need to focus their efforts in order to expand access, increase transfer and completion, and improve alignment with workforce needs.

**Short-term metrics** correspond to enrollment rates, cost measures, and training for high-demand occupations.

**Mid-range metrics** examine student persistence and success in the first two years of college.

**Long-term metrics** pertain to transfer and completion rates.

**Follow-up metrics** examine student success after departing the community college and may be affected by economic forces, as well as the actions of Arizona universities.

COHORTS

The 2017 Strategic Vision Outcomes Report tracks several cohorts of students.

**2014 and 2010 New Student Cohorts** are used to examine student persistence and success after two and six years, respectively.

**2014 and 2010 Credential-Seeking Sub-Cohorts**, defined as cohort members who earned at least 12 credits by the end of their second year, are used for some retention, transfer, and completion measures. Credential-seeking sub-cohorts provide a more accurate gauge of student success, as they take into account learners’ diverse education and training goals.

**2013-14 Occupational Cohort**, comprised of students who exited a community college in 2013-14 after completing a specified number of credits in an occupational pathway, is used in follow-up metrics related to wage growth and earning industry-recognized credentials.
Statewide, total annual enrollment at Arizona’s community colleges has declined from its high in 2010-11, and full-time student equivalent (FTSE) enrollment has diminished commensurately. This enrollment decline mirrors a national trend and reflects a greater number of students enrolling in universities and/or remaining in the workforce.

Across Arizona, total annual enrollment in Adult Basic Education (ABE) and/or General Educational Development (GED) courses reached 18,216 in 2015-16. Total annual enrollment of high school learners in dual credit courses reached 25,126. These programs are essential in expanding access to Arizona’s community colleges.
Since 2010-11, the percentage of Arizona community college students who are members of an underserved racial/ethnic group has increased substantially and exceeds the percentage of the state population belonging to an underserved minority group (40%).\(^1\) Arizona’s colleges enroll more adult learners than the national average (35%), but far fewer Pell recipients (51%).\(^2\)

At Arizona’s community colleges, only 37% of instruction in 2015-16 occurred in traditional semester-length courses held on campus Monday through Friday, 8am to 5pm. Extending access to many diverse populations, 63% of all student credit hours were earned online, at night or on the weekends, or at skills centers, American Indian reservations, or other locales.
Arizona’s community colleges enroll a much higher percentage (35%) of recent high school graduates than the national average (25%).² The vast majority of these students enroll in their local community college district. Arizona’s community colleges will continue to work with the Arizona Board of regents to improve college-going across the state.

At roughly $7,300 per year, the median net price of attending Arizona’s community colleges is just 15% of the state’s median household income. This rate is slightly lower than the national comparison (18%) and substantially lower than Arizona’s public universities (26-31%),³ making the institutions excellent and affordable options for postsecondary education and training.
Metrics 9 and 10:
Developmental Course Success Rates

Over two years, 77% of student credit hours attempted in developmental English or reading by the 2014 New Student Cohort were successfully completed (with a grade of A, B, C, or Pass). In that same time period, 63% of student credit hours attempted in developmental math by the same cohort were successfully completed (with a grade of A, B, C, or Pass).

Metrics 11 and 12:
Success After Developmental Education

After six years, nearly half of developmental English or reading learners in the 2010 New Student Cohort successfully completed a college-level course in English, and 31% of developmental math learners in the same cohort completed a college-level math course. These success after developmental education rates are similar to national averages.⁴
Over two years, 80% of student credit hours attempted in college-level courses by the 2014 New Student Cohort were successfully completed (with a grade of A, B, C, or Pass). This rate has steadily increased over the past four years.

In 2015-16, between 66% and 80% of student credit hours attempted in College Algebra, English Composition I and II, and Speech were successfully completed (with a grade of A, B, C, or Pass). The rates at which Arizona’s community college students successfully complete these first college-level courses exceed the corresponding national averages in all four subjects.  

---

5. Additional context on national averages is provided, but it is not included in the natural text representation.
By the end of their second year, 56% of part-time learners in the 2014 Credential-Seeking Cohort had completed 24 credits, and 47% of full-time learners in the same cohort had completed 42 credits. Although there is room for improvement, these rates are notable, as research has linked attainment of credit thresholds to higher persistence and completion rates. ²

Ninety-one percent of the 2014 Credential-Seeking Cohort (excluding those who transferred and/or earned a degree or certificate) persisted to spring 2015, and 78% of them returned the following fall. Arizona’s retention rates are substantially higher than the 53%⁷ reported as a national comparison, in part because the national figure is not limited to credential-seekers.
Between 2011 and 2016, the number of degrees and certificates awarded by Arizona’s community colleges increased by 26% to 43,877, despite declining enrollments. Of the 2016 total, 43% were degrees and 57% were certificates. These data reflect a concerted effort by Arizona’s community colleges to increase the number of learners earning postsecondary credentials.

After six years, 30% of the 2010 Credential-Seeking Cohort had completed a degree or certificate. Arizona’s graduation rate is somewhat higher than the most recent national comparison (25%), in part because the national number is not limited to credential-seekers.
In 2015-16, Arizona’s community colleges awarded 11,863 Arizona General Education Curriculum (AGEC) certificates. The AGEC is comprised of 35-37 credit hours of coursework that, upon completion, transfer to all public colleges and universities in the state and fulfill lower division, general education requirements.

Statewide, 19% of the 2010 Credential-Seeking Cohort completed an AGEC within 6 years, a 19% increase from the 2005 Cohort. Increasing the AGEC completion rate—a key priority for the state’s community colleges—will not only ease transfer to Arizona’s public universities but also help students earn bachelor’s degrees in less time and with fewer excess credits.⁸
Between 2010 and 2016, the number of students transferring from Arizona’s community colleges to an in-state, public university increased by 18% to 10,821, despite declining enrollments. In addition, the percentage of transfers who earned an AGEC and/or degree prior to transferring has increased, indicating that the transfer process is becoming more efficient and cost effective.

Statewide, transfer rates to public universities among ASSIST Transfer Behavior Cohorts have decreased slightly. However, the overall transfer rate (the percent of learners in credential-seeking cohorts who transfer to any four-year college or university within 6 years) has increased to 30%. Both rates are similar to or higher than the most recent national average (25%).
Statewide, 60% of learners in the 2010 Credential-Seeking Cohort achieved a successful outcome within 6 years. Because community college learners enter college with diverse education and training goals, and because they often attend part-time and/or earn credits from more than one institution, several national accountability initiatives—including the Student Achievement Measure—have broadened the definition of a successful outcome to include earning a degree or certificate, transferring to another two- or four-year college or university, or continued enrollment. Nationally, 63% of full-time students and 60% percent of part-time students achieve one of these successful outcomes within 6 years.¹⁰
Sixty-nine percent of all 2012-13 full-time transfers from Arizona community colleges to in-state, public universities earned a bachelor’s degree within four years. This rate has remained relatively constant in recent years and indicates that most full-time transfers are graduating from the state’s public universities in a timely manner.

Statewide, 47% of 2012-13 transfers from Arizona community colleges to all four-year institutions—public and private, in-state and out—earned a bachelor’s degree within four years. Somewhat lower than the national average (60%),¹¹ this percentage may reflect a high incidence of part-time attendance after transfer.
In 2016, an estimated 43.7% of the Arizona working-age population (residents aged 25-64) held a workforce certificate, associate degree, or bachelor’s or higher degree (up from 41.8% in 2014). Arizona’s community colleges are working closely with the Arizona Board of Regents and other postsecondary institutions across the state to reach the Achieve60AZ goal that by 2030, 60% of the Arizona working-age population will hold a postsecondary credential.
Out of all learners in the 2013-14 Occupational Cohort who took a technical skill or end-of-program assessment up to one year after college exit, 89% passed the assessment and/or earned an industry-recognized credential. Examples of occupational programs leading to industry-recognized credentials include nursing, EMT, construction, solar technologies, and fire science.
